

From the initial design concept through production and end-of-life, Rand provides comprehensive solutions tailored to your specific needs.

## Development

Component engineering, design support, and custom solutions to optimize performance.

Design testing, risk, and cost analysis to ensure a smooth transition from prototype to full-scale production.

## Pre-Production

## Production

Continuity of supply ensures market demands are met with robust quality control that exceeds industry standards.

Custom hybrid logistics, test services, recertification, and global sourcing capabilities lengthen product life cycles.

## Maturity

## End-of-life

End-of-life procurement, inventory management, and parts harvesting help cost savings and value recovery.
